

# Message from the Program Chairs

## CAI 2024

Submissions of two types of papers were considered at IEEE CAI 2024. Short papers limited to 2 pages (with the possibility of extending to 4 pages) were designed for focused and concise contributions to the program that could easily be converted into a poster presentation at the conference. Full papers, spanning 6 pages (with potential extension to 8 pages), were also welcomed this year for comprehensive discussions on research and results contributing to advancements in AI.

A total of 685 papers entered the conference management system. Following rigorous reviews by an international team of reviewers (whose names will be duly listed later in the proceedings) and additional assessments by meta-reviewers and senior meta-reviewers, 275 high-quality papers have ultimately been registered to appear in the conference proceedings. These contributions hail from authors across 40+ countries, reflecting a strong global presence and a blend of academic research with 30% participation from government and industry sectors.

We extend our sincere gratitude to all the reviewers, meta-reviewers, and senior meta-reviewers for their dedicated and timely efforts in completing the reviews in a professional manner.
